

International Students

Australia plays a significant role in international education and is the third most popular country in which to study, behind the United States of America and the United Kingdom.

Australia as a destination for international students

Students choose Australia not only for its quality of education but also for its diversity of educational and cultural experiences, the integrity of its qualifications, and its reputation for a safe and friendly environment.

International education is Australia’s third largest export industry. Total export income generated by all international education activity in 2016-17 was \$28.6 billion. School students are a small proportion of the total number of international students in Australia, accounting for just 4.4 per cent (\$1.2 billion) of the total export income from international education and 3.2 per cent of the total number of international students studying in Australia.

In 2017 total international student enrolments reached their highest point ever with 799,371 enrolments, growing by 12.7% over 2016. School sector enrolments grew by 10.7% over the same period to 25,762 enrolments although non-government sector enrolment growth over this period was 10.9%.

International students in Independent schools

Non-government schools enrol just under 36% of international students in the school sector.

Just over 7,500 overseas students, approximately 30 per cent of international school students in Australia, were enrolled in Independent schools in 2017.

The majority of international students in Independent schools – 86 per cent – were in the secondary years in 2017, with senior secondary accounting for the majority of enrolments. The remaining 14 per cent were in primary schools.

The major source country for the non-government school sector is China, accounting for approximately 50 per cent of total enrolments in the sector in 2017.

Together Hong-Kong, South Korea and Papua New Guinea account for a further 20 per cent of the total.

International student enrolments in the non-government school sector – Top 10 source countries, 2017

Nationality	Number of enrolments	% of total enrolments
China	5,333	57.8%
Hong Kong	838	9.1%
Vietnam	453	4.9%
South Korea	425	4.6%
Papua New Guinea	332	3.6%
Japan	271	2.9%
Thailand	199	2.2%
Malaysia	182	2.0%
Taiwan	150	1.6%
Indonesia	138	1.5%

Enrolment trends

International student enrolments in schools had been growing fairly steadily until 2009. This marked the beginning of a downturn across all sectors of education. The decline was due to a range of factors including the strength of the Australian dollar, changing visa arrangements, quality issues associated with some providers in some education sectors and changes in the relative attractiveness of competitor countries. The decline in international student enrolments in the schools sector was most significant in the non-government schools sector.

However Australia’s education system is well regarded, and the assurance of its quality, underpinned by the Australian Qualifications Framework, ensures that Australia remains an attractive study destination and 2017 data shows that enrolments and commencements across all sectors of education are growing strongly.

The 2017 data from the Commonwealth Department of Education and Training shows continued growth in commencements of 10.7% in the schools sector, including 10.9% growth in commencements in the non-government school sector.
